Are All The Reports About Swine Flu Scaring You?

VACCINE REPORT

On the 2009-2010 H1N1 Swine Flu

FACT #1: In 1976, the U.S. government declared a swine flu epidemic and more people reportedly died or were injured from the vaccine ... than from the swine flu!

Thomas Stone, M.D. called the swine flu scare of 1976 the, “greatest public-health fiasco in the history of the U.S.”. Here is what happened: President Gerald Ford, listening to his medical advisors, said a swine flu was going to sweep across America: “This virus was the cause of a pandemic in 1918 and 1919 that resulted in over half a million deaths in the United States, as well as 20 million deaths around the world.” Of course, 46 million American’s followed the President’s advice and got their swine flu shots and the vaccine killed at least 25 people, left at least 500 paralyzed and many thousands more injured. - Myth Busting Vaccine Report, Focus on: The 2009-2010 H1N1 Swine Flu, Dr. Tedd Koren, Koren Publications, Inc.

The reason that these figures are so low is, according to the US Food and Drug Administration (FDA) only 10% of the vaccine deaths and injuries are ever reported. Using the FDA’s figures, the swine flu vaccine may have resulted in 250 deaths with 5,000 people paralyzed and perhaps hundreds of thousands injured, but regardless of the numbers used the Program was so disastrous that it was stopped in a couple of months with 4,000 American’s seeking damages of $3.5 billion. - Stone T.: Open letter to pediatricians on flu vaccines. Also - Anderson WL. Government and the flu: a short history. Mises Daily. January 2, 2004.

Influenza out breaks, as you know, are common and do kill unhealthy people, but what makes the flu so difficult to control is that it mutates faster than each new strain can be matched and manufactured, so the vaccine that you get is probably not going to be as effective as purported against the latest mutation variant. - CDC. Vaccine information: Influenza vaccine. Also, Keep Kids Healthy. Influenza. Also, World Health Organization (WHO) Press Release. Experts decide content of 1999-2000 Northern Hemisphere influenza vaccine, (Feb. 17th 1999).

The viral mutagenic rate is also why our immune system needs to be very well trained and supported because it may also have difficulty recognizing the latest version and the assistance of natural immune boosters and natural antivirals, such as Echinacea, can decrease not only

Influenza is more appropriately compared to the common cold than to the Bubonic Plague and to hear all the fuss about it seems to me just ignorance-based pro-medical nonsense! There is evidence that the 2009-2010 swine flu scare might be far more devastating...if you get the swine flu shot!!!

**Fact #2:** Millions of people did die in the 1918-1919 pandemic, but most died from secondary infections and poor medical advice as well as decreased immunity!!

Researchers report the 1918-1919 world flu pandemic deaths were almost all caused by secondary bacterial infection due to pneumonia because of a weakened immune system and the major pathogen that caused the influenza-related pneumonia was *Streptococcus pneumonia*, which is not a major problem with the antibiotics of today and is even addressable with certain herbs that contain antiviral and antibacterial phytochemicals, especially Garlic and Echinacea, as well as many homeopathic remedies. - *(see end of report for information on nutritional immune support, herbs that have proven antiviral and antibacterial properties, and homeopathic remedies specific to addressing viral and bacterial infections)* Brundage JF and Shanks GD. *Deaths from bacterial pneumonia during 1918-19 influenza pandemic. Emerg Infect Dis.* 2008;14: 1193-1199.

Also reported was the fact that the medical care mortality rate was dismal with medical care in U.S. military hospitals averaging 36% and in U.S. civilian medical hospitals deaths were between 30%- 40%, and even a 68% mortality rate was reported in medical hospitals in New York City, However, the mortality rate under chiropractic, osteopathic or homeopathic care was zero to 1% with a death rate as low as 1 in 8000 reported by some practitioners.

The almost unbelievable difference is due to medical doctors suppressing fever with aspirin while the other health-care practitioners, in addition to using their health promoting techniques, allowed the fever to continue to help train the immune systems natural ability to destroy the foreign invaders.

Thus, taking aspirin and Tylenol™, as usually recommended to lower fever, can prolong or worsen the symptoms of flu and you should also know that Tylenol™ is known to be very harmful to the liver. “It is estimated that acetaminophen poisoning calls exceed 100,000 per year. Studies indicate that acetaminophen overdose results in over 56,000 injuries, 2,500 hospitalizations, and an estimated 450 deaths per year” (source) and yet it is still the most widely prescribed or recommended medication for pain and fevers.

Fever is one of your body’s most powerful immune stimulating mechanisms and can, in some instances, kill the foreign invaders. In one study involving persons with flu who took either aspirin or acetaminophen (Tylenol™) were sick about 3½ days longer than people who did not take these antipyretic drugs. - Plaisance KI et al. Effect of antipyretic therapy on the duration of illness in experimental influenza A, Shigella connei, and Rickettsia rickettsii infections. Pharmacotherapy. 2000; 20 (12):1417-1422.

Medical doctors have used high fevers (108 degrees) to treat malaria and it is noteworthy that marathon runners sometime reach a body temperature of 109 degrees. Guyton’s Textbook of Medical Physiology indicates that infants can tolerate fevers of 104 for a while, but must be monitored for convulsions, which can easily be lowered by tepid water baths or tepid enemas; however, fevers above 103 degrees, skin palor, dehydration and very rapid breathing are reasons to immediately seek help from a competent health-care professional. - AC Guyton M.D. and Hall Ph.D Textbook of Medical Physiology10th ED. p. 822, W B Saunders Co. NY. Also, Clayton Thomas, M.D., Editor. Tabor’s Cyclopedic Medical Dictionary 17th Edition. p. 724. F.A. Davis Philadelphia, PA

FACT #3: The World Health Organization (WHO) did not declare the swine flu (H1N1) as pandemic because of hospitalizations and deaths and it is not spreading all over America killing large numbers of people, but rather scare tactics are being used to increase sales!

A pandemic only means that H1N1 viral infections have reached many countries and has nothing to do with the severity of the illness, but rather its geographic arena. Swine flu, at this stage, is no worse and probably milder than regular flu, but the CDC [falsely] claims that every year there are about 36,000 regular flu deaths and using the FDA’s estimate that only 10% are reported, indicates that this number may be much larger, but The National Vital Statistics Reports, which is the CDC’s official records only indicate a few hundred people die every year from influenza and many of these deaths occur with compromised immune systems, pre-existing conditions or in the elderly.

For example, in 2001 there were only 257 people that actually died from the flu. Putting the flu scare hype into perspective, in the same year (2001) more than 13 times as many U.S. citizens (3,454) died from malnutrition and 4,269 people died from just asthma, which many link to vaccinations. - CDC. Deaths: final data for 2001. U.S. Dept of Human Health and Services, National Vital Statistics Reports (Sept. 18, 2003); Vol. 52, Number 3. Also, Mckeever, TM et al. Vaccination and allergic disease: a birth cohort study. American Journal of Public Health (June 2004); 94 (6): 985-990. Also, Kemp T et al. Is infant
Are the reported high death numbers supposed to frighten you into getting the swine flu shot? Even according to the WHO Director - General Dr. Margaret Chan on June 11, 2009 reported, “Many people are having mild disease, they recover without medicines in some cases and it is good news.” As of mid July 2009 there have only been 40,617 “probable and confirmed” cases of swine flu with only 263 deaths in all 50 states including D.C., Puerto Rico, the Virgin Islands, Guam, and American Samoa. Please note that “probable” means not sure they were related to swine flu (what are the real numbers?) and even if the FDA’s numbers were applied, the swine flu still does not appear to be as bad as the regular flu.

Is influenza dangerous? Of course it is, especially with persons that have a compromised immune system, diabetes, and anemia because of increased risks of complications that can potentially lead to death. Another meritoriously targeted group of concern would be the elderly and individuals that have pre-existing heart, lung, and kidney conditions. - U.S. Dept of Health and Human Services. Inactivated influenza vaccine: what you need to know-2006-2007. CDC (June 30, 2006) Also, U.S. Dept of health and Human Services. Live, intranasal influenza vaccine: what you need to know-2006-2007, CDC (June 30, 2006).

Unfortunately, persons in poor health are at increased risk for adverse reactions to the flu vaccine, as are young children. - Miller NZ. Vaccine Safety Manuel-for concerned families and health practitioners. New Atlantean Press, Santa Fe, NM, 2008, pp.84-86.

The Centers for Disease Control (CDC) is openly pushing all vaccinations and has even issued a press release on January 27, 2005 entitled, “CDC Announces New Strategies to Promote Continued Influenza Vaccinations.” Not only does the CDC actively promote sales for Big Pharma, but gives States grants and other incentives to promote mass vaccinations. Since 1965, the CDC has given States hundreds of millions of dollars and if the States do not show proof that they have achieved a certain vaccination rate than the grants can be withheld.

The Comprehensive Childhood Immunization Act of 1993 gave the Department of Public Health and Human Services authority to award some $400 million to States to set up and track children as well as enforce mandatory vaccinations recommended by the federal government. The Performance Grant program gives, either $50, $75, or $100 per child to be in compliance with all federally recommended vaccines, including hepatitis B. DHHS Secretary, Donna Shalala empowered the States to give newborn babies social security numbers in order to track vaccination records in half the states and it is the CDC’s plan to get every state to have a centralized data base containing every child’s medical records.

Even the pharmaceutical companies fund States to force tracking and compliance of all vaccinations, including hepatitis B vaccinations via the Robert Wood Johnson Foundation (Johnson & Johnson) the operators of All Kids Count. In 1989, Merck and Co. who manufactures the MMR vaccine as well as chickenpox and hepatitis B vaccines, joined forces with Johnson &
Johnson forming the Worldwide Consumer Pharmaceutical Company and their goal is to become “one of the premier worldwide consumer products companies.” The vaccination sales of Merck reached 1 billion dollars in 1997.

The Task Force for Child Survival is the parent of All Kids Count and is directed by former CDC director Dr. William Foege and is supported by the World Health Organization, the Rockefeller Foundation, United Nation’s Population Fund, the World Bank, vaccine manufacturers, and entities that sponsor the Children’s Vaccine Initiative (CVI) in Geneva launched at the World Summit for Children in 1990 and promotes, “the development and utilization” of vaccines for all the world’s children. Merck, Lederle and Connaught, the three largest U.S. vaccine manufacturers, also funds Every Child by Two. - *Hepatitis B vaccine: The Untold Story.*

Sooner or later you will come to realize that vaccinations with all their publicity and polish is just advertisement that appeals to the very heart of parents and in reality has nothing to do with your child’s health, but rather profit for those that possess unimaginable and detrimental control over us...and lots of it! And the Codex Alimentarius gives Big Pharma absolute control of your health by eliminating or restricting the sale of anything “natural” that competes with them profiting from your sickness!!!

**FACT #4: Many medical professionals are refusing the swine flu shot and numerous highly esteemed scientists see absolutely no value in its use, efficacy or safety!!!**

Many MDs, nurses and other healthcare workers are refusing the swine flu shot. They are fortunate to have a choice, unfortunately, there are those who wish to make this dangerous, useless vaccine mandatory ... could it be for profit or just out of ignorance? In a report that appeared that appeared in the British Medical Journal, the Seattle Times reported: “About half of Hong Kong’s health workers would refuse the swine flu vaccine, new research says, a trend that experts say would likely apply worldwide.”

In an interview by Der Spiegel magazine, Tom Jefferson, M.D. stated, “In the worst case, the vaccine will be totally ineffectual. In the best of cases, the few decent studies that exist show that the vaccine mainly works with healthy young adults. With children and the elderly, it only helps a little, if at all.” When asked by Der Spiegel magazine, “Is it reasonable to keep vaccinating against seasonal influenza?” Dr. Jefferson replied, “I can’t see any reason for it.” - Myth Busting Vaccine Report, Focus on: The 2009-2010 H1N1 Swine Flu, Dr. Tedd Koren, Koren Publications, Inc. Also, *Half of health workers reject swine flu shot. The Seattle Times.* August 25, 2009. Also, Interview with epidemiologist Tom Jefferson, MD. Spiegel on-line international. July 21, 2009

In 1976 more than 500 people were paralyzed with Guillain-Barre syndrome (GBS) and 30 of them died following flu vaccination and in the same year there was a 50% greater incidence of Guillain-Barre among flu-vaccinated U.S. Army personnel than unvaccinated civilians. There is a causal relationship between the flu shot and GBS because the rate of GBS in 1997 in Ohio among non-vaccinated individuals was 2.6 per million and 13.3 per million in those that

Additionally, Dr. Mendelsohn, M.D. reports that in one study doctors even discouraged half of the elderly that requested flu shots not to get them. - Robert S. Mendelsohn, M.D. “*The Drive to Immunize Adults is On.*” p. 2, *Herald of Holistic Health Newsletter*, Sept.-Oct. 1985

According to Dr. John Seal of the National Institute of Allergy and Infectious Disease, “any and all flu vaccines are capable of causing Guillain-Barré”. And in my opinion, it isn’t the swine flu (H1N1) that should scare you, but the deaths and documented serious adverse reactions to the swine flu shot!

“In addition to GBS, numerous studies have investigated and/or documented other serious reactions to the flu vaccine, including encephalopathy, brainstem encephalitis, poly neuritis, optic neuritis, myelitis, vasculitis, myelopathy, facial paralysis, brachial plexus neuropathy, reactive arthritis, bullous pemphigoid, polymyalgia rheumatic, uveitis, Gianotti-Crosti syndrome, erythromelalgia, pericarditis, polyangitis, thrombocytopenia, cryoglobulinemia, cellulitis, myositis, and ‘asthmatic exacerbations’ in persons with a history of asthma.” - Miller NZ. *Vaccine Safety Manuel—for concerned families and health practitioners.* New Atlantean Press, Santa Fe, NM, 2008, p. 82 (There are 36 scientific papers referenced).

This is also something to consider, the majority of illnesses with symptoms of fever, fatigue, cough and aching muscles are not caused by the influenza virus. Non-influenza viruses such as rhinoviruses (RSV) respiratory syncytial virus, adenoviruses and parainfluenza viruses, can by their symptoms, be called influenza-like illnesses (ILI) also bacteria such as *Legionella spp.*, *Chlamydia pneumoniae*, *Mycoplasma pneumoniae* and *Streptococcus* have been documented as the cause of influenza-like illnesses (ILI). - MMWR November 9, 2001/50(44); 984-6

The Centers for Disease Control (CDC) even admits that, “Like any drug, vaccines are capable of causing serious problems, even death.” (source) The real question might be, will the swine flu vaccine really help those individuals or is getting healthy and taking natural immune system enhancers the real answer? And even more importantly, is the concern really about helping us or is it just profit driven hype!

**FACT #5:** The H1N1, swine flu vaccination appears to be as harmful as the other influenza vaccines and apparently will not be adequately tested for safety, adverse reactions and long-term consequence and
also contains untested dangerous chemicals as well as the proven neurotoxin mercury!

The new swine flu vaccine (H1N1) is made in PER.C6 cells (human retina cells) and contains MF59, a potentially debilitating oil-based adjuvant primarily composed of Tween 80, Span85, and squalene. In laboratory testing, all oil adjuvants injected into rats were found to be toxic with all rats developing an MS-like disease leaving them crippled and dragging their paralyzed hindquarters. Severe immune responses were noted in humans, such as arthritis and lupus with injections of only 10-20 parts per billion. - Myth Busting Vaccine Report, Focus on: The 2009-2010 H1N1 Swine Flu, Dr. Tedd Koren, Koren Publications, Inc. Also, Kenney RT, Edelman R. Survey of human-use adjuvants. Expert Review of Vaccines. 2003; 2 (2): 167-188. Also, Matsumoto G. Vaccine A: the covert government experiment that’s killing our soldiers and why Gil’s are only the first victims of this vaccine. NY: Basic Books. 2004:54.

Squalene is also linked to the autoimmune disorders rheumatoid arthritis, multiple sclerosis, lupus, ALS (Lou Gehrig’s disease) and Gulf War Syndrome (GWS). Research also reveals that all the Gulf War Syndrome soldiers immunized for service in Desert Shield/Desert Storm had antibodies to squalene while all the Persian Gulf veterans without GWS had no antibodies to squalene.- Asa PB et al. Antibodies to squalene in Gulf War syndrome. Exp Mol Pathol. 2000;68(1):55-64.

**WARNING:** This year’s swine flu shot contains one million times more squalene than the vaccine that caused Gulf War Syndrome in over one hundred thousand soldiers. - Jacobucci G. Million times more squalene in H1N1 vax than caused GWI!! August 25, 2009.

It is reportedly recommended by the government that each person get 1 regular flu shot and 2 (H1N1) swine flu shots. Fox News reports, that on Friday, 09-11-2009, the NIH is set to release results of its own studies of hundreds of adults that confirm that one swine flu shot works, and the U.S. work shows that people are protected between eight days and 10 days after that inoculation. ([source](#)) This is good news for those that want the shot, but it also doubles the population exposure.

Also, The Washington Post confirmed that the swine flu vaccine, which is set to be rolled out nationwide this fall in what some fear could ultimately become a mandatory vaccination program, **will contain mercury**, a toxin linked with autism and neurological disorders (and numerous other serious conditions associated with mercury toxicity) and also posted that pregnant women, children and health care workers will be getting the first of the three vaccinations. ([source](#))

WebMD also reports “pregnant women and people caring for or living with infants will go to the front of the line, the main U.S. vaccine advisory committee today recommended. Next would come health care workers and first responders who have direct contact with patients, children 6 months to 4 years old, and kids 4 to 19 years old with medical conditions that put them at risk of severe flu disease. There are about 42 million Americans in these groups.” ([source](#))
This is something worth considering, “according to Hugh Fudenberg, M.D., the world’s leading immunogeneticist and 13th most quoted biologist of our times (nearly 850 papers in peer review journals): If an individual had five consecutive flu shots between 1970 and 1980 (the years studied) his/her chance of getting Alzheimer’s Disease is 10 times higher than if he/she had one, two or no shots. Dr. Fundenberg said it was due to mercury and aluminum that is in every flu shot (and most childhood shots). The gradual mercury and aluminum buildup in the brain causes cognitive dysfunction.”

Since this vaccine is one of the four mandated vaccines that may contain mercury, (Physician Desk Reference (PDR) 2004 From: T. O’Shea. The Sanctity of Human Blood-Vaccination is not immunization, 8th Edition. p. 91. Two Trees San Jose, CA 2004) the target groups for this vaccine makes no sense at all, because the EPA limit is only 0.1µg of mercury per kilogram of body weight and a new born already has received a Hepatitis B vaccine that introduced into its body 12.5µg of mercury, which is 39 times more than allowed by law and it becomes worse when you consider children are getting multiple vaccinations. - WorldNetDaily.com “Vaccines fueling autism epidemic?” Report: U.S. infants exposed to mercury beyond EPA, FDA limits.

The elderly, for reasons stated above by Dr. Fundenberg and pregnant mothers in their 2nd or 3rd trimester because “the greatest susceptibility to methymercury neurotoxicity occurs during late gestation”. - P. Grandjean, et al. Methymercury exposure biomarkers as indicators of neurotoxicity in children aged 7 years. American Journal of Epidemiology 1999; 150(3):301-305.

The manufacturer Novartis told the associated press that the vaccine will likely be on the market before the safety and efficacy trial finishes. A federal advisory panel permitted the FDA to approve the swine flu vaccine before safety trials are finished and this is not supposed to happen with any drug. Can you imagine any American being exposed to death and impairment without adequate safety trials?

The current research isn’t sufficient because it includes only 6,000 subjects using a variety of vaccines cultured differently and some without an adjuvant, which is a poor standard for determining safety and efficacy, and certainly doesn’t support the release of the swine flu vaccine to the public and to use Dr. Tedd Koren’s phrase, it is like, “the fox is guarding the henhouse”

It seems apparent that “post marketing surveillance” might become the new standard for vaccine safety and efficacy, which means that we will find out how dangerous or safe it is only after millions have been vaccinated. It is well reported that even FDA approved drugs pass equivocal trial standards.

Not everyone has missed the obvious rush to market, in fact The Guardian in July 27, 2009 noted that, “In a drive to inoculate people against swine flu before winter, many European governments say they will [also] fast-track the testing of a vaccine, arousing concern among some experts about safety and proper doses.” (source) Also, Cheng M. Europe fast-tracking swine flu vaccine. The Guardian. July 27, 2009.
Is it just coincidence that, almost all of the CDC’s 15 member Advisory Committee on Immunization Practices (ACIP) that make vaccine recommendations have financial ties to the vaccine industry? Most of the recommendations might appear to be profit driven based upon the population expansion of vaccine recommendations, for example, 74 million were vaccinated over the age of 65 as well as children with medical conditions during the 1999-2000 flu season, but for the 2000-2001 flu season, the committee lowered the age for universal vaccinations from 65 to 50 adding 41 million people to the vaccination population potential and for the 2002-2003 season the ACIP included healthy 6 month old to 23 months old children, again increasing the vaccination population potential and increased it again in the 2004-2005 season to include children up to 5 years of age. - Myth Busting Vaccine Report, Focus on: The 2009-2010 H1N1 Swine Flu, Dr. Tedd Koren, Koren Publications, Inc.

In my opinion, this “post-marketing surveillance” and is just the continuation of children, as well as adults, being used as guinea pigs. For example, in a series of drug experiments conducted on infants and children who were under the guardianship of the New York City Agency for Children’s Services (ACS), and living at the Incarnation Children’s Center, a foster care facility under contract with ACS, the children being tested were diagnosed with HIV infection, but some were, only “presumed” infected in trials that involve the greatest level of risk and discomfort. Phase I and II testing test the safety and toxicity of the drugs as well as the maximum tolerated dose (an amount that may cause death).

All of the experiments were supported by U.S. government agencies of the National Institutes of Health with some collaboration with drug companies including GlaxoSmithKline, Pfizer Genentech, Merck, Biocine, Lederle-Praxis Biologicals and MicroGeneSys. These vulnerable children, some only a few months old, are enrolled in these toxic experiments without the consent of relatives or guardians. If the parents refuse to give the children their medication, they are placed with foster parents where the ACS can continue to give medication without a court order.

The Alliance for Human Research Protection filed a complaint with the Office of Human Research Protection and the FDA’s Office of Compliance claiming violations of 45 CFR (Code of Federal Regulations) 46.409 and 21 CFR 50.56. (source)

How important are safety and efficacy trials? The CDC reports that during the 2003-2004 flu season 135 children died and 59 of those deaths occurred in children that had received their flu shots, but the other 76 that died were health compromised due to prior vaccination immune suppression. - Centers for Disease Control, source.

No wonder Dr. Fudenberg M.D. believes that the entire vaccine department of the CDC is breaking the Nuremberg Code by administering the flu vaccine to 6 month-old babies year after year and should be faced with the Nuremberg trials. - From Dr. Fudenberg’s speech at the NVIC International Vaccine Conference, Arlington, VA Sept. 1997
This might be a valid analogy since the death tolls, disabilities and concern for human life from CDC vaccination “mandates” may appear to be quite similar. A study done evaluating the effects of flu shots on 50,000 Post Office staff comparing absences in both vaccinated and unvaccinated individuals showed there was no significant difference in flu occurrences. - J.W. Smith “Vaccination in the control of influenza. Interim report to the Director of the Public Health Laboratory Service on a collaborative study with the Post Office”. Lancet 1974 Aug 10;2(7876):330-3

If vaccinations really don’t work and are so harmful why do medical doctors allow them to be given to their patients? According to Julian Whitaker, M.D., “Managing disease is a lucrative business. As long as people stay sick, they keep coming back for more...inside that $1 trillion is a great deal of profit for them [special interest groups]...The focus of our health care system is on disease rather than health and this is at the center of our rising costs. Given these high costs, our relatively low health as a people is deeply disturbing. It would be one thing if Americans were getting their money’s worth. But while the drug companies, doctors, insurance companies, and hospitals are pulling in substantial money, the medical approach promoted by these people is not necessarily helping us get well.” - Julian Whitaker, M.D., Dr, Whitaker’s Guide to Natural Healing p. 4 Prima Publishing Rocklin, CA 1996

But, what is your reason for continuing to take the risk of potentially serious adverse reactions, including death that are associated with vaccinations?

**FACT #6: You and your children are assuming all the risks of death and any adverse reaction from taking any vaccination, including the swine flu shot, because the manufacturers have been granted immunity from lawsuits!**

Most Americans don’t realize that when the swine flu shot is recommended by the CDC and mandated by the individual states, the millions that are exposed to the potential for harm do so at their own risk because the Department of Health and Human Services granted vaccine makers, and all federal officials that tell people to get vaccinated, immunity from lawsuits that result in death or injury from the vaccine. *(source)*

If vaccinations are so safe, why did the manufacturers request immunity? You may not be aware that The National Childhood Vaccine Injury Act of 1986, which was passed primarily because between 1980 and 1986, individuals brought damage claims of $3.5 billion due to deaths and/or severe disabilities from adverse vaccine reactions, but the Program currently only covers the vaccines designed to prevent tetanus, pertussis, measles, mumps, rubella, polio, hepatitis B, *Hemophilus influenzae* type b, varicella, rotavirus, and pneumonia. - Vaccine Injury Table, 42 C.F.R. § 100.3 (2005).

It might also surprise you that between 1989 and 2009 there have been 13,052 claims filed with only 2,341 of the 13,052 submitted cases settled to date, in the amount $1,894,714,546 ... a lot of damage awarded for supposedly “safe vaccines”. *(source)*
There are very strict guidelines that must be followed in order for a victim to even be considered for compensation under the Act and many deaths and disabilities that are vaccine related, therefore, aren’t actually filed. A most appropriate question would be, how many millions of children and adults actually died or suffered as a result of vaccinations, but were not eligible for compensation and how many trillions of dollars did the drug companies make in the process?

**FACT #7: Getting a disease is not “bad” for you ... it is the only way to train your immune system so that you can acquire real immunity!!!**

Innate immunity includes the ability of the body to

1. produce white blood cells and reticuloendothelial cells that "eat" invaders,
2. destroy organisms that we consume with food by acid secretions and digestive enzymes,
3. resist invasion of organisms by our protective coat of skin,
4. and by certain chemicals, found naturally in our blood, that attach to toxins or other foreign bodies and destroy them.

Our blood stream contains:

1. lysozyme, a mucolytic polysaccharide that attacks bacteria and causes them to dissolve,
2. basic polypeptides which inactivate certain types of gram-positive bacteria,
3. properdin which is a very large protein that reacts directly with and destroys certain gram-negative bacteria,
4. and naturally occurring antibodies that have the specific ability to destroy certain bacteria, viruses, or toxins.

These natural antibodies protect the body by a) direct attack on the invader, b) activation of the complement system of 9 different enzymes that digest the wall of bacteria or make them more susceptible to being eaten by white cells or by "neutralizing" viruses by attacking their molecular structure.

With acquired immunity, the body basically activates the built-in mechanisms to produce specific and powerful protective mechanisms against lethal bacteria, viruses, deadly toxins and other foreign proteins. With this type of immunity, the body sometimes does not react or block the invasion for several days or weeks after exposure, but then, develops extremely powerful resistance to these specific invaders.
Exposure to foreign invaders causes the body to actively respond producing specific cells called lymphocytes or stem cells that when acted upon by the thymus gland and other tissue sites produce "memory cells" that can lay dormant and become very aggressive upon re-exposure.

Most people don’t realize that there are many benefits to actually getting sick! Many healthcare professionals have recognized the benefits of contracting acute infectious diseases. Hippocrates, the “Father of Medicine,” wrote: *Diseases are crises of purification, of toxic elimination. Symptoms are the natural defenses of the body. We call them diseases, but in fact they are the cure of diseases. It is the very process of activating our immune system and training its detoxification processes that promote good health.*

We know that naturally acquired childhood diseases have a strengthening and healing effect on children resulting in an immune system that has been tested and fully trained, which also helps maintain health through their adult years. Naturally acquiring the flu and the symptoms of fever, vomiting, diarrhea, sweating are evidence that our body is at work, activating these built-in mechanisms, and if properly managed by allowing the disease to run its course, we not only develop immunity, but are left with a much stronger and healthier defense system against the next invasion, for example, researchers have discovered that those who contracted infectious childhood diseases have less cancer as adults. - Albonico HU, Braker HU, Husler J. *Febrile infectious childhood diseases in the history of cancer patients and matched controls. Medical Hypotheses.* 1998;51(4):315-320.

Another good example of the strengthening and healing effect of contracting diseases and its impact on chronic illness, such as respiratory infections, often disappear after just contracting measles. Drs. Buehler and Wolf. *Soziale Hygiene*, Merkblatt 114

Children at the children’s hospital in Basle, Switzerland with chronic kidney infections were intentionally caused to contract measles to increase immune function and its curative powers until the 1960’s. - V. Chakravati, Annals of Tropical Paediatrics, 1986, 6: 293-294

So why do we continue to bypass the inherent mechanisms of immunity designed to improve the quality of our life with vaccinations? Health-care and medical practice is the ultimate oxymoron, they should be called sickness-care professionals because that is actually what they practice. We are just ignorant of the truth and place our health and lives in entities that may not be worthy of our trust, but are dependent upon our ignorance for profit … the sicker we are, the richer they get!

FACT #8: Americans better wise up and do it quickly because there is a concerted attack not only on our health, by the medical monopoly, but on our very ability to even make health choices … that directly affect our lives and the future of this nation!

Benjamin Rush, M.D., signer of the Declaration of Independence wrote, “Unless we put medical freedom into the Constitution, the time will come when medicine will organize into an undercover dictatorship … To restrict the art of healing to one class of men and deny equal privileges to others will constitute the Bastille of medical science. All such laws are un-American and despotic and have no place in a republic … The Constitution of this republic should make special privilege for medical freedom as well as religious freedom.” - Benjamin Rush, M.D., Signer of the Declaration of Independence and Physician to George Washington; From The Autobiography of Benjamin Rush

Is it possible that we are already too late? As John McKnight, Professor of Communications Studies and Associate Director of the Center for Urban Affairs at Northwestern University, said in his essay The Medicalization of Politics, “The essential function of medicine is the medicalization of politics through the propagation of therapeutic ideology. This ideology, stripped of its mystifying symbols, is a simple triadic credo: 1) The basic problem is you. 2) The resolution of your problem is my professional control. 3) My control is your help. The essence of the ideology is its capacity to hide control behind the magic cloak of therapeutic help. Thus, medicine is the paradigm for modernized domination. Indeed its cultural hegemony is so potent that the very meaning of politics is being redefined. Politics is (usually) interactive-the debate of citizens regarding purpose, value, and power. Medicalized politics is unilateral--the decision of

What the medico-pharmaceutical industry survives under is a mask of deception that what they do is based upon “scientific” studies, when actually this is rather deceiving since the “Office of Technology of the United States Government reported several years ago that 80% of conventional medical therapies have no basis in science ...” - Julian Whitaker, M.D., *Dr. Whitaker’s Guide to Natural Healing*, p. xi. Prima Publishing. Rocklin, CA 1996

In essence, what they offer are flawed, unscientific studies with skewed information that reports only what they want to show, under the guise of science, using paid consultants that persuade efficacy through the manipulation of facts. Every conceivable trick is used to perpetuate the myth of “medical science” whether it involves surgery, drugs or vaccinations.

“The greatest threat of childhood diseases lies in the dangerous and ineffective efforts made to prevent them through mass immunizations ... There is no convincing evidence that mass inoculations can be credited with eliminating any childhood disease...There are significant risks associated with every immunization and numerous contraindications that make it dangerous for the shots to be given to your child.” - Robert S. Mendelsohn, M.D. *How to Raise a Healthy Child in Spite of Your Doctor* Contemporary Books Chicago. IL 1984 From: *Contemporary Books Chicago*. IL 1984

Infectious disease is not the major threat to our children’s health, but chronic illnesses due to the insult and assault on their immune, nervous and other organ systems. There is an almost epidemic array of diseases emerging today, most of which were rare or unknown prior to mass inoculations, including autism, developmental disorders, allergies, ADD and ADHD, (attention deficit disorders and hyperactivity), asthma, cerebral palsy, cancer, diabetes, epilepsy, anorexia, bulimia, Tourette’s syndrome, stuttering and a host of other conditions that the literature indicates is not just coincidental, but appears to be related to the toxicity of vaccinations.

You cannot inject foreign substances such as viruses, toxins and foreign proteins into the body of a child or adult, bypassing all the natural defense mechanisms and expect a favorable outcome, in fact vaccinations can be a terrific shock to the system. Organic Consumer Report, December 4, 1962 From: W. James. *Immunization-The Reality Behind the Myth* 2nd Ed. p. 10 Bergin & Garvey Westport, CT 1995

Jane Orient, M.D., executive director of the Association of American Physicians & Surgeons, testified before the House of Representatives on June of 1999 that, “Asthma and insulin-dependent diabetes mellitus, causes of lifelong morbidity and frequent premature death, have nearly doubled in incidence since the introduction of many new mandatory vaccines ...” Instead of our children becoming healthier because of the increasing number of vaccinations the opposite appears to be true, our children are sicker than ever and chronic disease is widespread among the intensely vaccinated population. - Jane Orient, M.D., *executive director of the Association of American Physicians & Surgeons addressing the Subcommittee on Criminal Justice, Drug Policy, and Human Resources of the Committee on Government Reform U.S. House of Representatives* (June 14, 1999) and Dr. Tedd
Most lay persons don’t realize that we have built into us the mechanism to cure all disease, except for some genetic disorders and excluding the bio-weapon virals. However, new research suggests that even genetic expression is quite responsive to external surroundings and demonstrates that nutrients have a powerful impact on both gene expression and the function of the DNA repair mechanisms. - MR Werbach, M.D. with J Moss, D.D.S.,C.N.S.,C.C.N. *Textbook of Nutritional Medicine*. p. 4. Third Line Press, Inc. Tarzana, CA 1999

Therefore, the very name allopathic medicine (conventional medicine) by definition and consensus practice is not a good idea and should immediately raise a red flag! According to Webster’s dictionary, one who practices allopathic medicine treats disease by the use of agents, producing effects different from those of the disease treated (opposed to homeopathy). In other words, if your blood pressure is high allopaths give something that will lower it.

Homeopathy, on the other hand is the method of treating diseases by drugs, given in minute doses that would produce, in a healthy person, symptoms similar to those of the disease (opposed to allopathy) and cause the body to respond appropriately effecting self-healing. *Webster’s Encyclopedic Unabridged Dictionary of the English Language*. pp. 40 & 679. Gramercy Books. New York, NY 1989

The treatment of disease symptoms by synthetic man-made and un-natural substances in very large and toxic quantities do effect changes in the symptoms, but cause additional symptoms that must be treated by yet another harmful substance. Allopathic medicine is not the “natural” way of doing things!

There is little or no attempt at treating the cause of the disease/symptom, but rather altering body function to treat symptoms with pharmaceutical drugs that do alter the symptom profile, but produce other symptoms and/or cause serious side-effects and a very high death rate. - Julian Whitaker, M.D., *Dr. Whitaker’s Guide to Natural Healing*, p. 11. Prima Publishing. Rocklin, CA 1996

Consider this, “Medical science has absolutely, 100 percent, failed in the curing and prevention of illness, sickness and disease. More people get colds and flu, cancer, diabetes, heart disease, multiple sclerosis, lupus, muscular dystrophy, asthma, migraine headaches, joint, neck and back pain, acid reflux, ulcers and stomach problems, menopause, more frequent and severe menopause, attention deficit disorder and hyperactivity, chronic fatigue, insomnia, bad skin, acne and dandruff, suffer from depression, stress, and anxiety, sexual dysfunction, and infertility, allergies,, arthritis, constipation, fibromyalgia, cold sores and herpetic breakouts, prostate problems, yeast infections, more people are on diets and taking diet products, yet more people are fat ‘dangerously obese’… than ever before. Yet surprisingly enough … there are more people going to visit doctors, getting diagnostic testing, taking nonprescription and prescription drugs and more of them and more surgeries performed than ever before. Medical science is failing! The percentage of Americans dying of cancer today is the same as it was in 1970 and even 1950! Over 200 billion has been spent since 1971 trying to prevent and cure
cancer. Americans spend over $2 trillion a year on healthcare, yet the American infant mortality rate is higher than 40 other countries. People in 47 other countries live longer than Americans, yet Americans consume over half of the drugs manufactured in the world.” CIA-The World Factbook. Allyoucanread.com

According to an article published in Lancet, “The pharmaceutical industry spends more time and resources on generation, collation, and dissemination of medical information than it does on production of medicine ... Through their generation and dissemination of information, transnational companies can greatly influence clinical practice ... Sometimes, their commercially determined goals represent genuine advances in health-care provisions, but most often they are implicated in excessive and costly production of information that is largely kept secret, often duplicated, and can risk undermining the best interests of patients and society.” Joe Collier, Ike Iheanacho. “The pharmaceutical industry as an informant.” The Lancet 2002; 360: 1405-1409

Exactly what information is disseminated is pretty much left up to the drug company and it appears to almost always be information that is potentially profitable to them whereas information that is detrimental is withheld or skewed so as not to interfere with marketing and profiteering.

I say good luck to this effort with the physicians associated with the A.M.A. because other health care professionals have been doing this for years. Dr. Koop also estimates that out of the 2.1 million deaths per year in the U.S., 1.6 million are related to poor nutrition. - Department of Human Health and Services. Pub. No. 88-50210, 1988.

There are even 108,000 deaths reported annually from malnutrition in nursing homes alone. - Burger, Jones and Bell. Malnutrition and Dehydration in Nursing Homes: Key Issues in Prevention and Treatment. National Citizens’ Coalition for Nursing Home Reform. June 2000

And this raises the question ... what can we really do about addressing sickness and disease since all we know to do is race to our medical doctor for every sniffle, cough, ache and pain?

**FACT #9:** It really is possible to enjoy optimum health without vaccinations, never see a medical doctor, and save lots of money ... with the exception of catastrophic or crisis care!

The literature is replete with study after study demonstrating that gross nutritional deficiencies are plaguing this nation. - MR Werbach, M.D. with J Moss, D.D.S.,C.N.S., C.C.N. Textbook of Nutritional Medicine. Third Line Press, Inc. Tarzana, CA 1999 Also, JE Pizzorno, Jr. N.D. and MT Murray, N.D., Textbook of
Research clearly proves that the consumption of a high saturated fat, inadequate essential fatty acid consumption, low mineral intake, high empty calorie diet or high protein diet, especially carnivorous, causes or contributes to a broad spectrum of health related diseases. These diseases are certainly preventable and should be treated as diet/nutritional deficiencies, not symptomatically, by prescription medication, with very, very few exceptions!

There are many factors that impact health, poor dental health is a marker for numerous diseases, stress has a pronounced impact on decreasing resistance to disease, lack of exercise profoundly impacts a broad spectrum of health problems, including obesity, illicit and medicinal drugs also suppress our immune system and destroy vital organ function, but the most detrimental factor is the Standard American Diet (SAD) which is incredibly deficient in the amount of nutrients needed for healthy cellular regeneration to occur and promote proper immune function, thus nutritional supplementation is a must for almost everyone.

There are natural substances that have been scientifically proven to boost the performance of these built-in mechanisms that are much safer than vaccines.

I feel the need to inform you that 5 of my 10 children have never been vaccinated and have never been to an M.D. and also that we have an excellent dietary program that includes nutritional supplementation, exercising well, with some Morrow’s enjoying National or World Class athletic status, and specific homeopathic and/or herbal remedies are used PRN.

For the Flu, We take Engystol, a homeopathic oral tablet that if taken at the first sign of “tingling or itchiness in the eyes, throat or nose” usually alleviates all flu symptoms and I can’t remember when they have actually contracted the flu, but I also make sure we take immune system enhancers, such as Beta 1,3 Glucan, a polysaccharide noted for its ability to stimulate macrophage activity (cells that eat foreign invaders) or Mycoceutics, which contain a full complement of the beta glucans, 1,2; 1,3; 1,4 and 1,6 found in a combination of 10 medicinal mushrooms that also have other constituents effecting the immune system; we regularly take Garlic and Echinacea because it is found in my world recognized formulation, “Optimum Health Essentials”, we also take extra Calcium and Magnesium (highly bio-available form) because I believe they are the number one dietary deficiency in America along with Vitamin D, as well as a high omega 3 balanced formulation of Essential Fatty Acids. This dietary supplemental protocol has served my family very well!

About the author Winston Morrow, D.V, PhD.

For information on nutritional immune support, antiviral and antibacterial properties of certain
herbs, and homeopathic remedies specific to viral and bacterial infections or nutritional supplements that support specific health concerns, call or visit www.nutritiondynamics.com.

Notice to Consumers:
No information is provided as an enticement to purchase and in accordance with section 201(g) of the Food, Drug and Cosmetic Act, is not intended to treat, prevent, cure or mitigate any disease, but rather nutritional support for physiologic function and is for your perusal and to be used in concert with your physician.
